At Purdue University, I am a Ph.D. Candidate in the Robot Vision Lab (RVL) under the supervision of Prof. Avinash Kak. My research interest is in deep learning and computer vision, especially for medical imaging.

Education

- **Doctor of Philosophy** **Purdue University**
Electrical and Computer Engineering, GPA: 4.00/4.0 2017 – Fall 2023
- **Master of Science** **Purdue University**
Electrical and Computer Engineering, GPA: 3.53/4.0 2015 – 2017
- **Bachelor of Science** **Purdue University**
Electrical and Computer Engineering, GPA: 3.81/4.0 2012 – 2015

Technical Expertise

Languages: Python (7+ years), C/C++, CUDA

Python Tools: NumPy, SciPy, Matplotlib, OpenMP

Machine Learning: PyTorch, TensorFlow, sklearn

Computer Vision: OpenCV, skimage, OpenGL

Research Experience

- **Robot Vision Lab, Purdue University** **West Lafayette, IN**
PhD Candidate August 2015 – Current
 - Designed a generative **image-to-image translation** framework that translates H&E-stained images into various IHC stains while accurately predicting the diagnosis-critical molecular representations. [\[pdf\]](#)
 - By using a novel adaptive contrastive learning based objective, the training of the virtual IHC-restaining network is robust to the inevitable and often severe inconsistencies in groundtruth H&E-IHC image pairs.
 - Designed a **generative stain augmentation network** for augmenting H&E-stained cell images with synthesized yet realistic stains that can help desensitize downstream application-specific models to stain variations. [\[pdf\]](#)
 - By disentangling representations for cell morphology and stain while using a Laplacian Pyramid based architecture, the model can achieve transformation to arbitrary stains with high efficiency.
 - Designed an end-to-end automated, real-time, machine learning-based **semantic segmentation** framework for **automatic explosive recognition** in 3D dual-energy X-ray CT images of airport passenger checked baggage.
 - By using an ensemble of **deep learning and boosting** algorithms, the framework achieved state-of-the-art detection rates while maintaining low false alarm over a large-scale dataset (5k+ real-world baggage scans).
 - Developed a GPU-accelerated **model-based CT image reconstruction** algorithm for dual-energy X-ray CT that outperformed state-of-the-art approaches in both signal-to-noise ratio and convergence speed. [\[pdf\]](#)
 - Contributed to installing and maintaining an OpenStack **cloud computing** framework for all research at RVL.
 - Developed a novel **motion planning** algorithm that leverages recursion and gradient descent to find efficient yet smooth trajectories for robot navigation in congested and narrow spaces. [\[pdf\]](#)
 - Developed **computer graphics** software in OpenGL for 3D interactive apple tree pruning simulation. [\[pdf\]](#)
- **10x Genomics, Inc.** **Pleasanton, CA**
Image Analyst Intern May 2021 – August 2021
 - Developed a framework for performant **nuclear instance segmentation** in H&E-stained histological images.
 - Designed and implemented **generative adversarial networks** for normalizing the wide range of variations among the H&E stain appearances.
- **Vipshop US, Inc.** **San Jose, CA**
Augmented Reality Intern May 2017 – August 2017
 - Developed a **true scale estimation** module for monocular ORB-SLAM by integrating IMU inputs using Extended Kalman Filter on mobile devices.
 - Conducted literature review on and implemented various algorithms for the Multi-Armed Bandit problem.

- **TNT, Leibniz University** **Hanover, Germany**
Research Intern *June 2014 – August 2014*
 - Improved the Random Forest algorithm for unbalanced datasets by integrating class importance and leaf weights. [\[pdf\]](#)
 - Proposed algorithm outperformed the state-of-the-art on real-world face detection and traffic sign recognition datasets.

Teaching Experience

- **Deep Learning, Head TA, ECE60146** **Purdue University**
Graduate level class on CNN, RNN, Transformer, GAN, etc. *Spring 2023*
- **Computer Vision, Head TA, ECE664** **Purdue University**
Graduate level class on Geometric Computer Vision, e.g. Stereo Reconstruction. *Fall 2022*
- **Digital Systems Senior Design, Head TA, ECE477** **Purdue University**
Senior undergrad level class on Embedded System design and programming. *2019 – 2021*

Relevant Coursework

| Computer Vision | Deep Learning | Data Mining |
| ○ Computational Models | Convex Optimization | Sparse Modeling |
| Digital Image Processing | Operating Systems | Multiple-View Geometry |

Selected Course Projects

- Python implementation of various CV algorithms from scratch:

Homography estimation for image mosaicking	Iterative Closest Point for point cloud alignment
Levenberg–Marquardt algorithm	Zhang's algorithm for camera calibration
Stereo-based scene reconstruction	PCA, LDA and cascaded AdaBoost for face detection
- Python implementation of various ML algorithms from scratch:

Support Vector Machine	Boosted Decision Trees	Random Forest
K-Means	Hierarchical Clustering	Expectation Maximization
- Implemented a ResNet-based framework using torch to automatically detect metastasized breast cancer on gigabyte-sized whole-slide microscopic images.
